What's New in the?

1. Ideal for telecommuting and remote computer administrating. 2. Penetrates firewall and proxy server. 3. Can work transparently with dynamic IP address. 4. Can transfer files and clipboard contents between computers. 5. Can print remote document on local printer and reboot the remote computer. Console FFT Proxy Tunnel Tool is the perfect tool for your hacking work. It's a must have tool when you are trying to bypass Internet Firewalls. Features: If you want a GUI to assist you in the process of connecting to a Proxy Server, then this is it. It supports HTTP, HTTPS and SOCKS Proxy Servers in LAN, WAN and Internet. It also supports the Router Port Forwarding feature. VNC Explorer is a free and fast remote desktop client for Windows 7, Vista, XP. Use it to connect to Windows desktop computers and access their local resources remotely. View, transfer files, print, make presentations, remotely log on to a computer and more! It also allows you to use an Android phone as a remote device. This is an open source project and the source code is available. So even if you're not an open source fan, you can enjoy the remote desktop client and even contribute your changes if you wish. VNC Explorer is written in Java, based on the very latest Java technology and it allows you to use a very impressive display. It supports full-screen mode, double-buffering, hardware acceleration, etc. SoftEther VPN creates a private network that enables your computer to become a router which provides secure virtual private network (VPN) services. You can create a LAN within your network that is totally isolated from the internet. You can use your own computer or a Wi-Fi router to create your private network. It can work with wireless or wired network. SoftEther VPN provides protocol independence, an easy to use interface and great connectivity to the wireless network. It also supports many popular wireless protocols including 802.11b/g/n (WLAN), 802.11a (WIFI), 802.15.4 (ZigBee), 802.11mc (IEEE 802.11m), LoRa (layers on the Internet), LTE (UMTS), CDMA (WCDMA), GSM, and some proprietary protocols. You can also connect two or more SoftEther VPN clients to use the VPN services together to form a virtual private network.
