Q: Need the git equivalent of bzr up -r I have installed bzr on a computer and am using it with the bzr explorer plugin, and using command line for bzr push, bzr pull, bzr whoami, bzr branch etc... I would like to know if there is a way to write a.sh script that would bzr branch -r or bzr up -r A: You are using bzr from the bzr repo. In that case, the Bazaar documentation tells you what bzr does by means of a specific command: bzr update -r parent/1.8 So all you need is a shell script. If you installed bzr with bzr from the bzr development repo, it will tell you what to do with a new command: bzr up -r 1.8 # Bazaar 2.5.0 But bzr from the bzr development repo is not supported any more, but you can just download the tarball and build a bzr install from it. using System; namespace Lucene.Net.Index { /// /// This is an internal API that supports the LINQ to Entities infrastructure and not subject to /// the same compatibility as public APIs. It may be changed or removed without notice in any release. /// public class FieldNameComp
